This book has an active table of contents to access each chapter of the following titles:

1. A Naturalist's Voyage Round the World: The Voyage of the Beagle - Charles Darwin
2. The autobiography of Charles Darwin - Charles Darwin

A Naturalist's Voyage Round the World was described, on its first appearance, by a writer in the Quarterly Review as "One of the most interesting narratives of voyaging that it has fallen to our lot to take up, and one which must always occupy a distinguished place in the history of scientific navigation." The book here will never lose the value and interest for the originality of the observations by Charles Darwin.

Darwin published the book On the Origin of Species in his 1859 and successfully unified the theory of the life sciences and social science by explaining the diversity of life. After its publication, the book not only sent an unmatched impact to Biology but also to economy and social science.

Today, the scientific community and much of the general public have accepted evolution as a fact. Darwin's scientific discovery had influenced many later economists including Herbert Spencer and Thorstein Veblen in many ways.
Darwinian evolutionism is one of important intellectual strands that run through many works of later economists. The elements such as natural selection, the struggle for existence, and the survival of the fittest in Darwinism tells us that individuals have little or no control over the forces of change.

This book is for the readers who are interested in analyses of an economic system from an evolution approach and the deepest thoughts of human evolution process by Charles Darwin, one of the greatest thinkers on the planet. It is also for the readers who are interested in studying the background that Darwin wrote his greatest work On the Origin of Species.
